SAM ELECTRONICS L.L.C · DEIRA · DUBAI · SINCE 2003

ROUND 4

Mandatory Correction Order

Home page · 18 issues · global rules · send order

The home hero is the only finished section.
Everything else gets rebuilt to that level.

To: Claude Design
From: the owner, Sam Electronics
Date: 08 October 2026
Read this entire document before you touch a single pixel.
Every instruction here is a requirement, not a suggestion.

SECTION 0 · READ THIS FIRST

Why this document exists

I have reviewed the entire home page from top to bottom. I am going to be direct, because polite feedback has not worked: **the home hero is the only section that is finished.** It is realistic, alive, lit, branded and rich. **Almost everything after it is not.** Sections are white, flat, empty, cartoonish, static, or look like generic AI output. Several of my earlier instructions were half-applied, applied in the wrong section, or replaced with ideas I never asked for.

This document lists **18 numbered issues**, each with what is wrong, exactly what you must do, what you must not do, and a **Done when** checklist. A section is only finished when every box in its checklist is true. Not most. Every one.

> **Non-negotiable:** do not "interpret" these instructions into something easier. Do not swap my ideas for your own without asking. Do not skip a line because it is hard. If something is technically impossible in the design tool, **say so explicitly and propose the closest equivalent**, then wait. Silently delivering less is not acceptable.

0.1 The benchmark: the home hero

Every single section must reach the level of the home hero. Before you show me any section, put it next to the hero and ask:

1. Does it look as **realistic** as the iPad and phone in the hero?
2. Is it as **alive**? Is something always moving, even when I am not touching anything?
3. Is it as **rich**? Is there something worth looking at in every part of the screen, with no dead empty areas?
4. Is it as **branded**? Does it feel like Sam Electronics, not like a template?
5. Is it as **polished**? No clipped text, no overlaps, no leftover placeholders, no cheap shapes?

If the answer to any of these is no, the section is not done. Do not show it to me as done.

0.2 How we work this round (strictly)

1. **Step 1:** read the whole document. Then reply with a short summary of the Global Rules (Section G) and the **Environment Map** (Section E) in your own words, so I know you understood. Do not design anything yet.
2. **Step 2:** apply the Global Rules to the whole page (circuits, status dots, launcher, backgrounds, leftovers).
3. **Step 3:** work through the issues **in batches of 2 to 3, in page order** (Section S lists the batches). After each batch, stop and show me.
4. **Step 4:** for every animated section, show me a **recording or a sequence of step screenshots** (start, middle, end of the animation). A single still image of an animated section will be rejected.
5. **Step 5:** for every section, confirm each Done-when box by name ("Box 1: done. Box 2: done…").

> Why batches: you missed things in earlier rounds because too much was sent at once. Small batches, fully finished, are faster than big batches done halfway.

0.3 Things I will reject immediately

- Any section that is plain white or plain flat yellow with nothing designed in it.
- Any part, phone or product drawn as a flat rectangle, a cartoon shape, a bar, a stick or a blob.
- Any circuit line, node or trace that touches or crosses text, buttons, cards or images.

- Any visible leftover: "browse files", "No reviews yet", "Perk · coming soon" repeated, blank grey shapes, clipped words.
- Any section where nothing moves.
- Any colour outside the palette (no random greens, blues, browns, reds in decorative elements).
- Any airport, travel, passport or boarding theme. Never.
- Any "cut-off floor": dark ellipses, half-circles or black boxes under objects.
- A still screenshot presented as proof of an animation.

SECTION G · GLOBAL RULES · APPLY EVERYWHERE, ALWAYS

Global rules

These apply to every section, every page, every state. They override anything in older briefs that contradicts them. Read them twice.

G1. Realism

- Every object (phones, parts, tools, cartons, batteries, boards, devices) must look like a **studio product photograph**: real proportions, rounded corners where real objects are rounded, real materials (glass, brushed metal, PCB, foil, cardboard), key light, rim light, soft shadow, reflections.
- No flat CSS rectangles pretending to be phones. No cartoon parts. No grey slabs.
- Where real 3D is needed, use real 3D (Three.js with rounded/bevelled geometry, physical materials, environment lighting). Where you cannot reach realism, say so and structure the section so a **real image or image sequence** can replace the drawing later without changing the layout.
- Real assets will come at the build stage (product photos, 3D renders, shop photos, team photos, Google reviews). Until then use **high-quality placeholders**, never cartoons.

G2. Motion: three layers, every section

- **Idle motion:** something always moves on its own (flowing current, breathing glow, drifting light, rotating object, ticking numbers).
- **Scroll motion:** reveals, pinned scenes, count-ups, draw-ins. Every animation **replays** when scrolling back.
- **Interaction motion:** hover, click, drag, tap. Every interactive element reacts.
- Motion has weight: ease in and out, slight overshoot, settle. Nothing stops dead. Nothing freezes.
- Performance: animate transform and opacity only, target 60fps. Respect reduced-motion (static fallbacks).

G3. Circuits (corrected rule, read carefully)

- **Keep the circuits.** They are part of our identity, exactly like the home hero uses them.
- **Keep the progress line in the top nav bar.** Do not remove it.
- There is **no single continuous bus forced down the whole home page**. Each section may have its own decorative circuits where they fit, and some sections may have **one long circuit** running through empty space.
- Current moves as **soft flowing light streaks** (long gradient dashes), not tiny dots.
- Background circuits are **subtle**: no busy grids, no stripe textures, no tiled patterns behind content.
- **Circuits never touch or cross** text, buttons, cards, images or icons. Minimum clearance: **24px**. No exceptions.

G4. Palette discipline

Colour	Value	Role
Signal Yellow	#F7C032	Energy, highlights, primary buttons, current, active states. Used as a field only where a section's environment says so.
Graphite	#26282B / #3D3E3F	Dark environments, cards, text on light. Never flat black.
White	#FFFFFF	Cards, text on dark, clean surfaces.
Fog	#F2F3F4	Light environments, always with grain and light, never flat.
Status green	light green, pulsing	ONLY for the Open status dot.

Colour	Value	Role
Status amber / red	amber / red	ONLY for Closing soon / Closed status dots and error states.

- No other colours in decorative elements. Anything off-palette must be removed (examples found this round: a green tick, a blue/green globe, bright brown cartoon cartons, red stamps, blue sketch lines).
- Never flood a whole section in flat yellow with nothing designed in it (Issue 13 is what happens when you do).

G5. Typography

- Space Grotesk headings (medium/semibold, never heavy), Inter body, JetBrains Mono data, IBM Plex Sans Arabic.
- Headlines are big and confident and **enter with motion** (word by word, blur to sharp), never just appear.
- No tiny squeezed titles under the nav. No clipped words anywhere.

G6. No leftovers, ever

- No "browse files", no upload widgets visible to the public.
- No "No reviews yet". If there are no reviews, hide the rating element.
- No repeated "Perk · coming soon" lists.
- No blank grey rounded rectangles (found at the top of the Samsoom and Social sections).
- No clipped chips, tickers or labels. Use fade masks on empty space instead.
- No outdated sample data (example: iPhone 17 Pro and Galaxy S25 Ultra as "pre-order" are already released).
- No contradictory data (example: a parcel at the start of its route labelled "98% of the way").

G7. Status indicator (everywhere it appears)

- **Light green, softly pulsing** = Open.
- **Amber** = Closing within 30 minutes.
- **Red** = Closed.
- Never grey, never black. Applies to the nav pill, the Visit-us card, the footer and any other place.

G8. Floating "Ask Samsoom" launcher (every page)

- Replace the plain circle with a **pill launcher**: Samsoom's face + the words **"Ask Samsoom"**.
- Cycle: collapsed circle where Samsoom **waves and smiles** → pill **extends** "Ask Samsoom" → collapses, Samsoom **blinks** → extends again with a **different message** matched to page and time ("Need a screen?", "Open till 22:00", "Trade prices? Ask me", "Track my order") → repeat.
- Every 15–20 seconds. Stops extending after a few cycles if ignored. Green online dot. Static pill under reduced motion.
- It must never cover buttons or content.

G9. Language and themes

- One language per view. EN shows only English, the Arabic view shows only Arabic with full right-to-left.
- No airport, travel, passport, boarding, ticket or terminal themes. This is an electronics parts business.

G10. Mobile

- Every section must have a designed mobile version (390px). Heavy pinned scenes become lighter step-by-step reveals. Show me mobile for every section you finish.

SECTION E · ENVIRONMENT MAP

Every section gets its own environment

Rule: **no plain white sections**, and **never the same environment twice in a row**. Use this map. If you want to change one line of it, propose the change and wait for my approval.

#	Section	Environment	Issue
1	Hero + brand rail	Graphite + yellow slab (KEEP, approved)	1B
2	Teardown	Deep graphite stage, top spotlight, reflective floor	1
3	Parts Cabinet	Light brushed-metal workshop wall, warm light	2
4	Live Parts Board	Clean living graphite	3
5	Bench Test	Full yellow, studio vignette, bench surface	5
6	The Showcase (ads)	Warm fog studio; ads inside are graphite | yellow split	6
7	Deals & arrivals	Graphite with soft yellow light	7
8	Repair Lab	Clean light lab (per Part 1 spec, not reviewed this round)	—
9	Wholesale / Trade Floor	Yellow with branded tape and depth	8
10	Worldwide	Dark dot-matrix map, graphite	9
11	Story & branches	Warm fog with yellow light and grain	10
12	Team (Staff Badges)	Graphite wall with one spotlight	11
13	Who are you? (lanes)	Warm fog, light shifts with active lane	12
14	Sam Circuit (Charging Station)	Graphite studio, yellow only as energy	13
15	Meet Samsoom	Warm yellow studio	14
16	The Feed (social)	Graphite studio	15
17	Reviews	White with soft yellow light	15
18	Request console + Visit us	Yellow; console graphite, visit card white	16
19	Finale (Power-Up)	Deep graphite stage, spotlight, light particles	17
20	Footer	Unchanged structure, same on every page	—

ISSUE 01 · FULL REBUILD

Teardown: the phone opening scene

What is wrong

- The headline "Take any phone apart." sits **on top of the phone**. Text and phone overlap. Forbidden.
- The phone is a **flat grey slab** with a black rectangle for a notch and a **yellow rectangle as a camera island**.
- A big dark **ellipse floor** cuts across the scene.
- In the exploded view the parts are **primitive shapes**: a gold bar battery, a green plate with cubes, orange sticks, a grey slab back.
- The parts are **scattered left to right at different sizes** instead of stacked on one axis like a real exploded diagram.
- Two big **yellow glow blobs** sit on the floor.
- The **info panel disappears** during the explosion.
- There is **no reveal**: everything is visible at once, with none of the drama of an Apple product introduction.
- What is good and must be kept: the LED rail on the left and the single info panel layout.

What you must do

1. **Intro sequence (pinned, scroll-driven):**
   - Dark graphite stage. The headline **"Take any phone apart."** appears **word by word**, each word going from blur to sharp (60ms stagger), centred, with **nothing behind it**.
   - The headline then moves up and docks top-left. **Only then** the phone **rises from below** into a soft top spotlight.
   - The screen powers on: deep black OLED, our logo, a light sweep across the glass. "We stock every layer." appears in yellow.
   - The phone turns slowly to a ¾ view. **Text and phone never overlap at any moment of the scroll.**
3. **The phone:** a proper generic modern smartphone (not an iPhone copy, no Apple logo): thin even bezels, rounded corners (~12% of width), curved satin metal frame, side buttons, a realistic camera island with 3 glass lenses (dark glass, reflections, metal rings). Real 3D with physical materials.
4. **The exploded view:** 8 layers separate along **one single depth axis** from the ¾ view, **all the same outline and size**, evenly spaced, perfectly aligned.
   - Front glass: transparent with reflections.
   - Display: black panel with a flex tail.
   - Frame: satin metal mid-frame with antenna lines and screw holes.
   - Flex cables: thin amber ribbons with connectors, following the layout.
   - Logic board: dark green PCB with metal shields, chips, connectors.
   - Battery: black pouch with a white printed label and a connector.
   - Cameras: the module with real lenses.
   - Back glass: frosted, with the camera cut-out.
6. **Lighting:** key light top-left, rim light on every edge, soft shadows between layers. Floor: subtle reflection fading to dark. **No ellipse. No glow blobs.**
7. **Keep the LED rail**: each LED switches on as its layer separates, current flows to the next LED, the active layer's edges glow yellow, earlier layers dim to 70%.
8. **Keep the single info panel visible during the whole explosion** and update it per layer: number (03 / 08), name, stock rolling, grade chips, "From AED X", "Shop [part] →". Text types in.

9. **Finale:** all LEDs lit, layers fan out in a neat row, then slide down and drop into the Parts Cabinet drawers (Issue 2).
10. **Reverse** fully on scroll up: LEDs off, layers rejoin, phone turns back, headline returns.
11. **Build-stage structure:** keep the scene, timeline, LED rail and panel independent from the phone visual, so the drawn phone can later be replaced by a **pre-rendered image sequence** (150–300 frames on a canvas, like Apple's product pages). Write down the scroll/frame range for each of the 8 layers.
12. **Mobile:** no heavy pin; layers reveal one by one with the same LEDs and panel.

DO NOT

✕ Do not let any text overlap the phone.
✕ Do not draw parts as bars, plates, sticks or slabs.
✕ Do not scatter layers or use different sizes.
✕ Do not use glow blobs, ellipse floors or inner boxes.
✕ Do not hide the info panel at any point.
✕ Do not copy the iPhone design or show the Apple logo.

DONE WHEN (every box must be true, or the section is not done)

[ ] The intro plays as a sequence: words → dock → phone rises → screen powers on → ¾ turn.
[ ] No overlap between text and phone in any frame (show me 5 frames).
[ ] The phone looks like a real modern smartphone.
[ ] All 8 layers are real-looking, same outline, aligned on one axis.
[ ] No floor ellipse, no glow blobs.
[ ] LED rail lights one by one with flowing current.
[ ] Info panel is visible and updates through the entire explosion.
[ ] Finale drops the layers into the cabinet. Reverse works.
[ ] Layer frame ranges are written down for the build stage.
[ ] Mobile version shown.

ISSUE 01B · SMALL FIXES · STILL OPEN FROM LAST ROUND

Hero devices: phone ad reel and iPad cart

The hero is the benchmark and stays as it is, **except these two fixes, which were already requested and are still not done**.

Phone ad reel: repair card

- It shows a random, unidentifiable component. Replace it with a **realistic phone with a cracked screen**: the cracks glow yellow, **seal line by line** (~1.2s), the screen boots with our logo, text "Cracked screen? Fixed, tested, guaranteed." + "Book a repair →".
- Check **every** card in the reel: each must show a correct, recognisable product (screen, battery, back cover, frame, flex, camera, small parts) or service visual (repair, wholesale pallet, worldwide globe).

iPad: add-to-cart

- The cart currently turns into a plain yellow box with no animation. Replace it with a proper sequence (~1.4s):
  - finger-tap ripple on the "+" button;
  - a small copy of the product image **flies in an arc** to the iPad's cart icon, shrinking (600ms);
  - the cart icon **bounces** (1 → 1.2 → 1) and its badge number **rolls +1**;
  - a slim graphite toast slides up from the bottom of the iPad screen: "✓ Added · [product]", stays 1.5s, slides down.
- The toast stays within the bottom 12% of the iPad screen and never covers the product grid.

DONE WHEN (every box must be true, or the section is not done)

[ ] Every phone ad card shows a correct, realistic visual.
[ ] The repair card shows a cracked screen healing.
[ ] The iPad cart has fly, bounce, badge roll and toast. No yellow box.

ISSUE 02 · REBUILD

Everything we offer: Parts Cabinet + services

What is wrong

- **The drawers do not work properly:** the hover panel ("Screens · 2,211 · Shop screens") **covers the neighbouring drawer** and hides its number.
- **The open drawer looks broken:** a black box with a tiny phone cut off at the edge, and the handle sits on top of the part.
- **Closed drawers are empty grey striped plates.** Nothing is visible; users have to hover blindly.
- **They are huge:** 8 tall drawers take two full screens of scrolling for very little information.
- **The round logo node at the top of the cabinet and the yellow circuit traces branching to every drawer look cheap and cluttered.**
- **Service cards:** the idea is good but the quality is not:
  - Repair: the cracks are good, but the phone is generic and flat.
  - Wholesale: the boxes are flat orange squares with no texture, tape or label. The tag shows retail only; the trade price never arrives.
  - Worldwide: the globe is good, but the "DXB → Istanbul" pill **overlaps the globe**.
- Big empty gap under the service cards.

What you must do

1. **Remove the logo node and all circuit traces on and behind the cabinet.** The cabinet is clean: brushed metal frame, screws, drawers. Each drawer's own **LED** is the only live signal. Optional: a small, barely visible engraved metal nameplate "PARTS · DEIRA" on the top rail. No logo, no glow.
2. **Smaller, tighter cabinet:** 2 rows of 4, about **half the current height**, so the whole wall fits in one screen.
3. **On scroll the drawers open one by one and stay open** (stagger ~150ms, soft mechanical ease, tiny bounce). The user sees the whole wall of parts at once.
4. **Inside each open drawer:** black foam insert with the **real-looking part** in its cut-out, lit from above. Label tray stays on the drawer front (code, name, signal, stock).
5. **Hover:** the part **lifts out of the foam**, tilts slowly, casts a shadow; the drawer LED brightens; info (stock, from-price, grades, "Shop →") appears **inside that drawer's own area, under the part**. **Never cover a neighbouring drawer.**
6. **Drop-in from the teardown:** each layer drops into its drawer and that drawer's LED lights up (no node, no traces).
7. **Brand chips:** keep. Counts roll; drawers with zero stock close and dim.
8. **Scroll back up:** drawers close in reverse and reopen on the way down.
9. **Service cards, higher quality:**
   - Repair Lab: the realistic phone from Issue 1; cracks glow and seal line by line; screen boots; a test checklist ticks in (Touch ✓ · Display ✓ · Face ID ✓ · Speaker ✓); "TESTED" seal stamps.
   - Wholesale: realistic corrugated cartons with tape, a printed Sam Electronics label and a barcode, dropping onto a wooden pallet with weight (squash and settle); shrink-wrap sweeps with a plastic shine; tag flips **Retail AED 125 → Trade AED 98** with a "−22%" badge; unit counter rolls 10 → 50 → 100.
   - Worldwide: globe rotates; a glowing arc draws from Dubai to the destination with a parcel on it; status steps light (Packed → In transit → Delivered); the pill sits **below the globe, never on it**.

11. **Fill the gap under the cards** with a stat strip per card (Same-day repairs · Trade prices from X units · Shipping to X+ countries; real numbers to be confirmed by the owner).
12. **Mobile:** horizontal swipe of open drawers; services stacked with their animations.

DO NOT

✕ Do not let any hover panel cover another drawer.
✕ Do not show the logo node or cabinet circuits.
✕ Do not leave drawers closed and empty.
✕ Do not use flat or cartoon cartons.
✕ Do not put the status pill on the globe.

DONE WHEN (every box must be true, or the section is not done)

[ ] Cabinet fits in one screen.
[ ] Drawers open on scroll and stay open, parts visible.
[ ] Hover lifts the part; info stays inside its own drawer.
[ ] No logo node, no cabinet circuits.
[ ] Repair / Wholesale / Worldwide scenes upgraded as listed.
[ ] Trade price arrives on the tag.
[ ] No overlaps anywhere.
[ ] Gap under the cards filled.
[ ] Mobile shown.

ISSUE 03 · REBUILD LAYOUT

Live Parts Board: "What's moving on our shelves"

What is wrong

- **The circuits are a mess:** traces cut diagonally through the body text (through "Deira"), straight across the Low stock tile, cross each other, and leave from random corners.
- **Counter tiles are weak:** tiny dull icons (Just landed is an empty grey box), thin sparklines with no fill, no sense of change.
- **Trending chips are cut off** at the right edge ("iPhone 15 Pro OLED 1…").
- **The board feels unfinished:** tall empty rows, plain text, no visuals, values floating far from items, a footer that is just a sentence.
- **Unbalanced layout:** left column and board have different heights, the button hangs at the bottom, dead space remains.
- **Background:** vertical stripe texture plus a visible circuit grid. Too busy.

What you must do

1. **New layout:**
   - Top row: eyebrow + headline left, body text right. Nothing crosses it.
   - Main row: **[4 counter tiles stacked vertically] → [wiring channel ~96px] → [the board]**. Each tile lines up with its own lane.
   - Bottom: "Trending right now" as a full-width ticker, then the button aligned left under it.
3. **Wiring:** each counter connects to the board with **one straight horizontal trace** inside the wiring channel. Traces never cross text, tiles or each other. When a row lands on the board, a pulse travels from that row → channel → matching lane → its counter. The counter flashes, the number rolls up, a "+1" floats up and fades.
4. **Counters alive:** bigger animated icons (box dropping on a shelf; battery draining and blinking red; tag swinging down; truck driving off); sparkline with gradient fill and a pulsing dot on the latest point; delta line "+3 in the last hour"; active filter tile glows yellow.
5. **Board polished:** compact rows (~56px); columns time · status pill · small part thumbnail or country flag · item · value (values right next to content); new rows slide in and type in; newest row glows 1.2s; filter tabs in the header (All · Landed · Low · Drops · Shipped); footer = rolling "42 events today" + a tiny live activity bar.
6. **Trending ticker:** full width, continuously scrolling, **fade masks on both edges**, counts roll.
7. **Background:** remove stripes and grid. Clean living graphite with fine grain. Only the functional wiring channel and subtle decoration in empty space.
8. **Mobile:** counters 2×2 above the board, wiring hidden, counters still flash on matching rows.

DO NOT

✕ Do not route any trace through text or tiles.
✕ Do not clip chips.
✕ Do not use stripe or grid backgrounds.
✕ Do not leave the button floating with a dead gap.

DONE WHEN (every box must be true, or the section is not done)

[ ] Zero crossings: every trace is straight and inside the channel.
[ ] Pulse travels row → counter and the number ticks.
[ ] Icons animated, sparklines filled, deltas shown.
[ ] Board rows compact with thumbnails/flags and filter tabs.

- [ ] Ticker never clips words.
- [ ] Clean background.
- [ ] Mobile shown.

ISSUE 04 · GLOBAL FIX · APPLY EVERYWHERE

Global: circuits, nav progress line and backgrounds

Correction of an earlier message: do **not** remove the circuits and do **not** remove the nav progress line. An earlier version of my notes said to remove them. That was wrong. Follow this page.

What is wrong

- The continuous bus down the page edges is forced through sections where it does not fit and **cuts through content** (deal cards, Add-to-cart buttons, cartons, "Quality").
- Current is drawn as small dots, which does not feel like electricity.
- Several backgrounds are messy: visible grids, stripe textures, tiled tiles, random traces.

What you must do

1. **Keep the nav progress line** exactly as a feature of the top bar.
2. **Keep circuits as decoration**, in the same spirit as the home hero.
3. **Remove the idea of one bus forced down the entire home page.** Each section designs its own circuits where they fit; some sections may have one long circuit through empty space.
4. Current = **soft flowing light streaks** (80–160px gradient dashes), several at once, slightly different speeds; a brighter surge when something happens nearby (add to cart, new board row, drawer opening).
5. **24px minimum clearance** from every text, button, card, image and icon. Audit every section and reroute anything that touches.
6. Background circuits at **8–12% opacity**, only in empty areas. No grids, stripes or tiles behind content.

DONE WHEN (every box must be true, or the section is not done)

[ ] Nav progress line still present.
[ ] Circuits present and decorative per section.
[ ] Zero circuits touching or crossing content anywhere on the page (audit list provided to me).
[ ] Current flows as light streaks.
[ ] No busy background textures left.

ISSUE 05 · FULL REBUILD

Bench Test: "Nothing leaves Deira until it passes the rig"

What is wrong

- **Background:** moving waves, blurred traces and yellow blotches that match nothing else on the site.
- **No story, no stop:** it scrolls past like a normal section. Nothing gets tested while the user watches.
- **Quality / Warranty / Price are dead:** empty outline circles, grey text, static; descriptions far to the right, disconnected.
- **The rig looks cheap:** the probe arm overlaps the screen awkwardly, readout tiles are basic (Battery tile empty), cut-off engraved text, a random black bar, a cable dangling off the page.
- **The log** is a plain terminal box; "Parts tested" card is cut off.
- **Unbalanced:** left column twice as tall as the rig; big empty space under the rig.

What you must do

1. **Pinned scene:** the section holds for ~300vh and scrolling drives the test forward and backward (scrubbed, eased). Everything fits in one screen.
2. **Layout:** left = eyebrow, headline, the three words **big (~72px)**; right = the rig, **larger, full height**, with a printed work order feeding out of it at the bottom.
3. **Timeline:**

Scroll	What happens
0.00–0.10	Phone slides into the rig; clamps close with a click and bounce; status LEDs go green; rig powers on.
0.10–0.30	Check 1 Display: scan beam sweeps down the screen; pixel grid fills; tile flips to PASS ✓.
0.30–0.45	Check 2 Touch: probe taps grid points; touch trace draws; PASS ✓; the word "Quality" fills.
0.45–0.65	Check 3 True Tone: screen shifts warm to cool; sensor reads; gauge settles; PASS ✓; "Warranty" fills as a warranty sticker is applied.
0.65–0.85	Check 4 Battery: health gauge charges to 98%; PASS ✓; "Price" fills as a price tag drops in.
0.85–1.00	Thermal work order feeds out (grade · warranty · price · unit #); "PASSED" stamp lands; counter 1,293 → 1,294; page releases.

1. **The three words:** start as graphite outlines, **fill like a charging bar** left to right when their checks pass; the circle draws into a ✓; a short description types in **directly under** the word.
- **Replace the terminal log** with the printed work order. "Parts tested today" moves to a **digital counter in the rig's top bar**.
- **Realistic rig:** anodised aluminium plate, machined clamps with knurled knobs, spring-loaded probe on a rail that **never covers screen content**, real LEDs, cable plugged in with a connector running neatly off the bottom. No cut-off text, no black bar.
- **Background:** remove waves and blotches. Clean full yellow with a soft studio vignette and the rig's real shadow on a subtle bench surface.
- **Reverse** on scroll up. **Mobile:** no pin; checks play step by step with words filling.

DO NOT

✕ Do not keep the waves or blotches.
✕ Do not let the probe cover the screen.
✕ Do not leave empty space under the rig.

✕ Do not show a terminal box as the log.

DONE WHEN (every box must be true, or the section is not done)

[ ] Section pins and the four checks play in order, scrubbed both ways.
[ ] Words fill like charging bars with ✓.
[ ] Work order prints and stamps; counter ticks.
[ ] Rig realistic, full height, no defects.
[ ] Background clean yellow.
[ ] Recording shown.
[ ] Mobile shown.

ISSUE 06 · REPLACE SECTION

Model File → replaced by "The Showcase" (screen ads)

What is wrong

- It looks like **bathroom tiles**: grey grid background + grid technician's mat + tiled cards.
- **The customer gets confused:** search bar, brand chips, model chips, file card, mat, grades panel and "your pick" all at once, with no first step.
- **Cut-off rows** ("realm...", model chips off the edge).
- **Fake phone:** a giant flat beige rectangle with three black circles on a dark ellipse floor.
- **Unbalanced and empty:** huge selected tile with a tiny phone, uneven cards, one grade in a big empty white panel.
- It is not attractive and it does not sell anything.

What you must do

1. **Remove the Model File from the home page.** Browsing by model lives in Find My Part (nav and hero) and on the Brands & models page.
2. **Build "The Showcase":** a full-width ad stage in the style of **the owner's own banner** (graphite side with big bold typography, yellow side with a real product photo, a feature checklist, one clear button). Use the uploaded banner as the reference and placeholder.
3. **The ads are mainly about screens, one ad per screen grade:**
   - **Service Pack (lead ad):** the Samsung service box slides in, the flap lifts, the screen with its frame slides out and turns, the seal stamps, the checklist ticks (Genuine · Factory sealed · Warranty). "Shop Service Pack →"
   - **Original screens:** real part photo, checklist (Original panel · Tested · Warranty). "Shop Original →"
   - **OLED screens:** real part photo, benefits as text. "Shop OLED →"
   - **Incell screens:** real part photo, "Best value", benefits as text. "Shop Incell →"
   - **High Copy screens:** real part photo, "Budget-friendly and tested". "Shop High Copy →"
   - Optional last 1–2: Batteries (health gauge charges, capacity counts up) and Repair (cracked screen seals and boots).
5. **Motion at hero level:** headline word by word; product enters with depth and weight (overshoot, settle); subtle slow drifting smoke/light behind the product; "from" price badge stamps in.
6. **Controls:** story-style progress bars (one per ad, ~7s), auto-advance, pause on hover, arrows and swipe; current product exits with depth, next enters.
7. **Environment:** warm fog studio around the ad stage. No grids, no tiles.
8. **Mobile:** product on top, text below, swipe between ads.

DO NOT

✕ Do **not** simulate colour or quality differences between grades on screen (no OLED vs Incell colour slider). Differences are explained in text only.

✕ Do **not** add a back-cover colour-changing ad.

✕ Do not keep any grid or tile background.

✕ Do not use the Samsung logo as our own branding; it only appears on the genuine product packaging.

Assets: the owner designed the banner and has the source photos (Service Pack box, screens). They will be supplied for the build. Note: the banner slogan has a typo, "PRIORETY" must be "PRIORITY" if reused.

DONE WHEN (every box must be true, or the section is not done)

[ ] Model File removed from home.
[ ] Showcase built in the banner's style.
[ ] 5 screen-grade ads with entrance animations.
[ ] No simulated colour comparisons.
[ ] Progress bars, pause, arrows, swipe work.
[ ] Recording shown.
[ ] Mobile shown.

ISSUE 07 · STRONG IMPROVEMENT

Deals & arrivals: "Prices drop. Clocks tick."

What is wrong

- Circuits cut through the deal cards, with a node over "Add to cart" (fix per Issue 4: reroute, do not delete).
- **Broken carousel edges:** first and last cards half-faded with clipped text ("i Note 13 Screen", "148").
- **Repetitive, fake-looking cards:** same drawn renders, cryptic badges ("OR", "OL"), all identical, static countdowns.
- **Shipment card:** a circuit line runs along the bottom near the text; the parcel sits **at the start** of the route while the label says **"98% of the way"** and the countdown says 3 days. The data contradicts itself. Empty bottom-left, tiny parcel.
- **Pre-orders card:** bright white block clashing with the dark section; **outdated models** (iPhone 17 Pro, Galaxy S25 Ultra are already released).
- Dead space above the headline.

What you must do

1. **"Deal of the day" spotlight** (new, large, left): real product photo, **flip-clock countdown** with live seconds, **stock bar draining** ("32 of 50 left"), old price **struck through by a drawn line**, new price **rolls down** to its value.
2. **Carousel (right):** real photos, **grade in full words** (Original · OLED · Incell · Service Pack · High Copy), discount badge, stock signal, flipping countdown digits, auto-drift + drag + arrows, fade masks only on empty space; active first/last cards fully readable.
3. **Filter tabs:** All · Screens · Batteries · Ending soon · New arrivals.
4. **Card motion:** hover lifts the card and turns the product slightly; Add to cart uses the **same fly-to-cart animation as the hero iPad** (to the nav cart, bounce, badge roll).
5. **Incoming shipment:** faint real world map, Shenzhen → Dubai air route, a **plane positioned to match the progress**; 5 stages (Packed · Departed Shenzhen · In flight · Customs Dubai · Arrived Deira); flip-clock countdown and a progress bar that **agree**; "Notify me when it lands"; **no circuit line inside the card**.
6. **Pre-orders:** graphite (or yellow) card matching the section; phone **silhouettes** (no fake renders); part types; "Reserve" per row; waiting counter ("126 shops waiting", sample). Models are **next-generation and editable from the Control Room**, never already-released ones.
7. **Spacing:** cut the dead space; headline and "See every deal" on one aligned row.
8. **Mobile:** spotlight on top, swipe carousel, shipment and pre-orders stacked.

DONE WHEN (every box must be true, or the section is not done)

[ ] No circuit touches any card or button.
[ ] No clipped text in the carousel.
[ ] Spotlight deal with flip clock and price-drop animation.
[ ] Grades in full words.
[ ] Fly-to-cart works.
[ ] Shipment data consistent (position = % = countdown).
[ ] Pre-orders card matches, models current.
[ ] Mobile shown.

ISSUE 08 · FULL REBUILD · STRONG BRANDING

Wholesale & trade: "Stock up. Cost down."

What is wrong

- **Nothing says wholesale.** No cartons, pallets, stockroom or trade tiers.
- **Empty:** a big plain yellow area above the headline; the left side is only text and three ticks.
- The calculator is acceptable, but the scene under it is a **grey box** with a tiny pallet and a roller door.
- **The carton conveyor is childish**, and circuits run through the cartons (a node sits on the Baghdad box).
- **Trade ticker clipped** at both ends.
- **"Partner with us"** is a bright white block that does not match.
- **No branding:** nothing says this is the Sam Electronics trade floor.

What you must do: "The Trade Floor"

1. **Branded tape divider:** a strip of yellow packing tape printed "SAM ELECTRONICS · WHOLESALE · TRADE" runs across the top edge and presses on as you scroll in.
2. **Headline block:** a **"TRADE ONLY"** stamp lands beside the headline; a numbers band with count-ups (Since 2003 · X+ countries · Same-day quotes · Min. order X units; owner confirms numbers).
3. **Pallet Builder** (replaces calculator + grey box): pick a part, drag the quantity; **realistic cartons** (corrugated texture, yellow Sam Electronics tape, shipping labels) stack with weight; a **price tier ladder** (10+ · 50+ · 100+ · 500+) glows on the active tier and the unit price steps down; retail vs trade total and "You keep AED X" roll; when full, shrink-wrap sweeps and a label prints "SE-2611 · Ready to ship from Deira."
4. **Who we supply** (new): 4 compact cards (Repair shops · Traders · Exporters · Bulk buyers), animated icon + one benefit each.
5. **How trade works** (new): Apply → Get approved → Order at trade prices, lighting in order, ending in "Apply for a trade account".
6. **Remove the conveyor.** Trade ticker: full width, continuous, fade masks, flags and quantities.
7. **Partner with us:** graphite card with a world-map texture.
8. **Circuits:** subtle, empty space only, never across cartons, cards or text.
9. **Mobile:** pallet builder, then tier ladder; Who we supply as swipe; steps stacked.

DO NOT

✕ Do not use cartoon cartons or a conveyor.
✕ Do not leave flat empty yellow.
✕ Do not clip the ticker.

DONE WHEN (every box must be true, or the section is not done)

[ ] Section reads as wholesale at first glance.
[ ] Tape divider and TRADE ONLY stamp present.
[ ] Pallet builder with tier ladder works.
[ ] Who we supply + How trade works added.
[ ] No conveyor, no circuits through objects.
[ ] Mobile shown.

ISSUE 09 · COLOUR FIX

Worldwide: map + the four boxes

What is wrong

- The map is strong (dot-matrix, routes, live list). **Keep it.**
- The four boxes (Tracked · Packed · Quoted · Regions) and their **continuous animations are liked and must stay**, but their mini-animations use **off-palette colours**: a green tick, a blue/green 3D globe, a bright brown cartoon carton. Next to the serious map they look unprofessional.
- The animations are tiny thumbnails cramped in the corner of each box.

What you must do

1. **Keep** the four boxes and their continuous animations.
2. Recolour every mini-animation using **only our palette**, the same way the three service cards did: yellow for active/moving elements, white/soft grey for lines and text, graphite for surfaces.
   - Green tick → yellow tick.
   - Blue/green globe → graphite globe with yellow and white continents.
   - Bright brown carton → toned-down muted kraft/graphite carton with yellow tape.
4. Make the animations **larger** inside each box.
5. Optional (only if it looks good): a thin dashed route line linking the four boxes in the map's style; a "Where are you?" country search that lights the country on the map.

DONE WHEN (every box must be true, or the section is not done)

[ ] Four boxes and animations kept.
[ ] Zero off-palette colours.
[ ] Animations larger.
[ ] Map untouched.

ISSUE 10 · REBUILD

Our story & branches: "More than 20 years in Deira"

What is wrong

- It is **all white**: white cards on a pale background; nothing to look at; a big empty area beside the headline.
- **No images**: the story of real shops told in text only.
- **Dubai map** uses the default Google style (clashes with the brand) and shows a big "Use ctrl + scroll to zoom the map" overlay.
- **Madrid card is the worst part:** a hand-drawn building sketch on graph paper with a red "COMING SOON" stamp. Amateur.
- Empty space below the branch cards.

What you must do

1. **Photos on the timeline:** each version card gets a photo frame (Syria Tell 2003, current shop 2011, market branch, Sam Electronics today). Placeholder until the owner supplies photos: a tasteful blurred photo frame, never a blank card.
2. **Motion:** timeline line draws v1.0 → v4.0 on scroll; cards lift in; each photo **develops** like an instant photo; a big year counter rolls 2003 → today; v3.0 "RUNNING" pulses; v4.0 "INSTALLING" shows a loading bar.
3. **Environment:** warm fog with soft yellow light and grain; cards with depth (shadow, slight glass).
4. **Remove the Madrid blueprint sketch.** Madrid gets a **temporary map of the Plaza Mayor area**, same layout as the Dubai card, with a pulsing **"Opening soon" area circle** (not an exact pin) and "Tell me when it opens".
5. **Both maps brand-styled** (graphite/fog streets, yellow pin). No ctrl+scroll overlay: static until clicked, plus "Open in Maps".
6. **Fill the space below** with a stats strip: Since 2003 · 2 cities · X countries served (count-ups).
7. **Mobile:** vertical timeline, maps stacked.

DO NOT

✕ Do not keep the sketch or the red stamp.
✕ Do not use default Google map styling.
✕ Do not leave white empty areas.

DONE WHEN (every box must be true, or the section is not done)

[ ] Photo frames on all timeline cards.
[ ] Timeline draw + photo develop + year counter.
[ ] Madrid map card matches Dubai.
[ ] Both maps branded, no overlay.
[ ] Stats strip fills the gap.
[ ] Mobile shown.

ISSUE 11 · REPLACE WITH NEW IDEA

The team: "Five roles. Every order passes through all of us."

What is wrong

- Looks AI-generated and dry: blurry striped background, five identical cards with circuit corner nodes, a decorative circuit line with nodes under the cards.
- **Leaked upload UI:** every card shows "Photo coming soon · or browse files".
- **Empty stars "No reviews yet"** on every card.
- The flip card is a plain text panel. Nothing moves.

What you must do: "Staff Badges"

1. **Five Sam Electronics staff ID badges** hanging from **yellow lanyards printed "SAM ELECTRONICS"**, from a rail at the top of the section.
2. **Always moving:** badges sway gently with real physics (each slightly differently); the mouse nudges nearby badges.
3. **Badge front:** photo, or until photos arrive a **clean monogram of the role initials** (never "browse files"); role code T01–T05, title, name, years with us; a small hologram strip that shimmers as the badge sways.
4. **Click:** the badge swings up and **flips like a real card** (3D with weight); back shows "What I can help with", short bio, "Ask [name] →".
5. **"Every order passes through all of us":** an **order ticket** slides along the lanyard rail, pausing at each badge, which lights up: Parts Advisor → Parts Flow Controller → Bench Engineer → Finance & Checkout → Founder.
6. **Founder badge T05** (Tarek Alchoumari): slightly larger, gold edge, "Leading since 2003".
7. **Reviews:** hidden until real reviews exist.
8. **Background:** clean graphite wall, one soft spotlight. No stripes, no circuit line under the badges.
9. **Mobile:** horizontal swipe of badges that still sway; tap to flip.

> Alternative only if the owner asks for it: "The Board" (each member as a chip on a realistic logic board, an order packet travelling chip to chip). Default is Staff Badges.

DONE WHEN (every box must be true, or the section is not done)

[ ] Five badges on lanyards, swaying.
[ ] No "browse files", no empty stars.
[ ] Flip works with weight.
[ ] Order ticket travels and lights badges in order.
[ ] Founder badge distinct.
[ ] Clean graphite background.
[ ] Mobile shown.

ISSUE 12 · FULL REBUILD

Open to everyone: "One phone or one container"

What is wrong

- Cheap: plain white everywhere, no colour, no depth, no design idea.
- Lots of empty space above the headline and around the hub.
- **Remove the logo hub** and its thin grey connector lines (same problem as Issue 2).
- Animations are cheap and illustrate nothing: blank white phone + cart icon, phone on a green mat, grey blob with a dashed line, flat cartons.
- Four identical white cards with identical black buttons. Nothing tailored.

What you must do: "Who are you?"

1. **Layout:** left = eyebrow + headline (no dead space above) + **4 large selector tabs** (Retail customer · Repair shop · Trader & exporter · Bulk buyer), each with icon + one line. Right = **one large cinematic stage** that changes with the selected tab. Samsoom peeks in by the tabs asking "Who are you?"
2. **Each lane has its own environment and real scene** (palette used the way the service cards used it):
   - **Retail (fog/white with yellow light):** a hand holding a cracked phone; Find My Part types the model; the matching screen slides in with grade chips and price; "Collect in Deira or get it delivered" with a pin dropping. "Find my part".
   - **Repair shop (graphite workbench):** realistic top-down bench; a parts tray slides in; grades line up side by side; a **padlock opens to reveal trade prices**. "Open a trade account".
   - **Trader & exporter (dark dot-matrix map, Worldwide style):** a bulk list document gets scanned; "QUOTED" stamp; route arc draws from Dubai. "Plan my shipment".
   - **Bulk buyer (full yellow):** branded cartons stack on a pallet (Pallet Builder quality), shrink-wrap, "Incoming shipments first" badge. "Request a bulk quote".
4. **Motion:** auto-cycle ~6s per lane with a progress bar on the active tab; pause on hover; click to jump; exits with depth, entries with weight; the 3 benefits type in beside the scene.
5. **Background:** warm fog with grain and soft light that **shifts colour to match the active lane**.
6. **Consistency:** scenes reuse the style of Repair Lab, Worldwide and Wholesale, simplified.
7. **Mobile:** tabs as a chip row on top, stage below, swipe between lanes.

DONE WHEN (every box must be true, or the section is not done)

[ ] No logo hub, no grey connector lines.
[ ] Tabs + one stage, no four-card grid.
[ ] Four real scenes with their environments.
[ ] Auto-cycle with progress bar.
[ ] No white emptiness.
[ ] Mobile shown.

ISSUE 13 · FULL REBUILD

Sam Circuit membership: "Every order charges you up"

What is wrong

- **Everything is yellow:** background, cells, pills, and a busy yellow circuit wallpaper. Nothing stands out.
- **The battery contradicts the data:** all 4 cells full while the label says "You · 62%".
- **12 identical "Perk · coming soon" pills.**
- **No interactivity.** The "Preview · logged in" card is flat and disconnected.

What you must do: "The Charging Station"

1. **Environment:** graphite studio; yellow **only as energy** (charge, current, unlocked). Remove the yellow circuit wallpaper.
2. **Battery (centrepiece, realistic):** large cell, graphite casing, glass window, 4 tier marks (Connected · Charged · Supercharged · Fully Charged); a **glowing liquid-light fill that matches the real level** (62% = 62%) with a surface shimmer; a cable with current constantly flowing in.
3. **Charge simulator:** buttons for sample orders (+ Screen · AED 200, + Battery · AED 80, + Bulk order · AED 2,000); each tap sends a pulse down the cable and the fill rises; crossing a tier mark flashes the battery, pops the tier badge and **flips that tier's reward card from locked to unlocked**; "Reset" empties it with a power-down animation.
4. **Reward ladder:** one row per tier with animated icon (plug → bolt → double bolt → full battery), name, requirement, status chip (**Unlocked / AED X to go**); current tier highlighted; next tier progress bar.
5. **Replace the 12 pills:** 1–2 example perks per tier + one blurred "more perks revealed at launch" teaser. Examples to confirm with the owner: free delivery in Dubai, priority reservation on incoming shipments, extended warranty, early access to deals, a dedicated parts advisor.
6. **Member card:** digital Sam Circuit card (graphite, holographic edge) with name, tier, charge %, **tilting with the mouse** and a light sweep.
7. Optional: Retail · Trade toggle that switches thresholds.
8. Buttons: "Create account ⚡" (primary) and "Log in".
9. **Mobile:** battery, simulator buttons, ladder stacked, member card last.

DO NOT

✕ Do not flood the section in yellow.
✕ Do not show a battery that contradicts the percentage.
✕ Do not repeat "Perk · coming soon".
✕ No passport, stamp or travel themes.

DONE WHEN (every box must be true, or the section is not done)

[ ] Graphite environment, yellow only as energy.
[ ] Fill matches the real level.
[ ] Simulator works and flips tier cards.
[ ] Ladder shows Unlocked / X to go.
[ ] Member card tilts.
[ ] Mobile shown.

ISSUE 14 · REBUILD

Meet Samsoom: "Ask at 3 a.m."

What is wrong

- White page, white chat panel with a big empty area under two messages.
- **Blank grey rounded rectangles** float in the background and at the top edge.
- **Samsoom looks childish:** flat cartoon yellow phone, googly eyes, cable arms, plastic pedestal.
- **Broken layout:** the headline sits **below** the character, pushed off-screen.
- The demo plays 2 messages and stops.

What you must do

1. **Premium Samsoom (same character, better build):** realistic phone body (graphite metal frame, glass reflections, hero-level lighting); **face on the screen** as glowing yellow pixel-LED eyes and mouth on a deep black OLED; **sleek metallic arms**; no pedestal; he **floats** with a soft shadow.
2. **Always alive:** eyes follow the cursor, blinks, breathing bob; emotes in sync with the chat (thinking = loading dots, found it = ✓ ✓, happy = smile, waving on arrival).
3. **Layout:** eyebrow + headline top-left, Samsoom below on the left, chat on the right. All visible in one screen.
4. **Chat demo loops through 5 conversations** (A54 battery? · Which grade? · Are you open? · Trade prices? · Ship to Iraq?) with typing indicators and **rich answer cards** (product mini-card with photo, grade, price, Add to cart; hours card; shipping card). **No empty chat area.**
5. **Background:** remove all blank shapes; **warm yellow studio**; real questions drift faintly and one occasionally flies into the chat as the next message.
6. **Chat panel:** graphite glass, not white.
7. **Global launcher:** implement G8 (pill "Ask Samsoom" with the wave → extend → blink → new message cycle).

DONE WHEN (every box must be true, or the section is not done)

[ ] No blank shapes.
[ ] Samsoom realistic with on-screen LED face and emotes.
[ ] Headline above, layout in one screen.
[ ] 5 conversations loop with rich cards.
[ ] Graphite chat panel.
[ ] Launcher pill works on every page.
[ ] Mobile shown.

ISSUE 15 · SPLIT AND REBUILD

Social wall + reviews

What is wrong

- White again, with the same blank grey shapes at the top.
- Dry: three static post cards with drawn renders and three plain buttons.
- Reviews card says "No reviews yet / Be the first review": bad social proof before contact.
- Crowded: posts, reviews, Google, tabs and QR all side by side with no hierarchy.

What you must do: two clear moments

1. **"The Feed" (graphite studio):** three realistic phones (hero quality) fanned at angles, each **playing a live feed** (Instagram, TikTok, Facebook): posts auto-scroll, reels play muted, hearts float up with like counters; hover brings a phone forward and straightens it; follower counts roll (real numbers from the owner); "Scan to follow" QR with a sweeping scan line. Placeholders: the owner's banner and product photos.
2. **"What customers say" (separate band below, white with yellow light):** never "No reviews yet"; a big **Google rating card** (stars + number of reviews counting up); **two rows of real review cards** scrolling in opposite directions with fade masks; "Review us on Google" + "Write a review". Real Google reviews are connected at the build stage.
3. **Mobile:** one phone at a time (swipe between platforms), QR replaced by follow buttons; reviews as one scrolling row.

DONE WHEN (every box must be true, or the section is not done)

[ ] No blank shapes, no "No reviews yet".
[ ] Three live-feed phones.
[ ] Reviews band separate with Google card and two rows.
[ ] Mobile shown.

ISSUE 16 · IMPROVE

Request console + Visit us

What is good

The idea is strong (tabs + printed work order). Keep it.

What is wrong

- Plain form fields; the work order is a static tilted slip.
- **The "Open now" dot is grey/black.**
- Hours are plain text; empty gap between the address and the buttons.
- A circuit node sits right under the console's edge.

What you must do

1. **Live printing:** as the customer types, each field prints onto the work order like a thermal printer; the slip feeds down a little; a "3 of 4 fields" progress line.
2. **Switching tabs:** fields morph smoothly; the work order header reprints (TYPE: Bulk quote…).
3. **Sending:** the slip tears along its perforation, "SENT" stamps, the slip flies into the WhatsApp or email icon; Samsoom gives a thumbs-up.
4. **Status dot:** per G7 (light green pulsing / amber / red). Never grey.
5. **Visit us richer:** live clock with seconds; "Closes in 3h 59m" countdown; a **day timeline bar** for today with the two shifts as yellow segments and a moving "now" marker; today's row highlighted; fill the gap with a brand-styled mini map or a photo of the shop front + "Get directions"; buttons with WhatsApp and phone icons.
6. **Circuits:** reroute away from the console edge (24px).
7. **Environment:** per the map, the section background is yellow, console graphite, visit card white.

DONE WHEN (every box must be true, or the section is not done)

[ ] Typing prints live onto the slip.
[ ] Tear-and-send animation works.
[ ] Status dot coloured correctly.
[ ] Day timeline bar with now marker.
[ ] Gap filled.
[ ] No circuit near the console.
[ ] Mobile shown.

ISSUE 17 · FULL REBUILD · PREMIUM

Finale: "A phone on your bench? We have the part."

What is wrong

- **The broken phone:** grey slab, black rectangle notch, a **white diagonal bar slashed across it**, a small logo circle. It looks broken and cheap.
- A **black cut-off "floor" box** under it and a dead grey band above.
- **A circuit line runs through the word "Quality"**, making it look crossed out.
- Headline, buttons and stats are good but appear with no impact.

What you must do: "Power-Up"

1. **Remove** the phone, slash bar, floor box and grey band.
2. **Centrepiece:** the Sam Electronics logo rebuilt as a **large premium emblem** (machined metal and glass, thick glowing yellow edge, studio reflections), about **40% of screen height**, rotating slowly in 3D with light sweeping across it. The logo design itself stays exactly the owner's logo.
3. **Power-up sequence on scroll-in:** circuits from both sides (hero style) carry current to the emblem; on arrival the two phones inside the logo light up, a ring of light shockwaves outward, the circuits glow fully; then **"Quality · Warranty · Price" switch on one by one like neon signs** (flicker, then steady); circuits frame the words **but never cross them**; headline reveals word by word; buttons rise in; stats count up.
4. **Stage:** deep graphite, one strong spotlight on the emblem, tiny light particles rising slowly, soft reflection under the emblem fading to dark. No floor box.
5. **Idle:** emblem keeps rotating, current keeps flowing, neon words breathe softly.
6. **Mobile:** smaller emblem, same sequence, stacked.

DONE WHEN (every box must be true, or the section is not done)

[ ] No phone, no slash, no floor box, no grey band.
[ ] Emblem large, premium, rotating.
[ ] Power-up sequence plays in order.
[ ] No circuit crosses any word.
[ ] Idle motion continues.
[ ] Recording shown.
[ ] Mobile shown.

ISSUE 18 · REDESIGN · PREMIUM

Find My Part (the quick finder, everywhere)

This is the owner's most important feature: the fastest path from "I need a part" to the exact product. Right now it works, but it looks grey, flat and unfinished.

What is wrong

- **Grey on grey:** grey tiles on a grey panel on a dimmed grey page. Nothing feels premium or inviting.
- **Brand tiles are plain text in mixed styles** (some spaced capitals, some regular). They look inconsistent, not designed.
- **Identical, empty tiles:** a name and "12 models" with a lot of dead space inside each tile.
- **Unbalanced grid:** 14 brands in rows of 6 leave a broken last row with two lonely tiles and empty space.
- **Model step is text only:** model name + code, no picture, so customers cannot recognise their phone at a glance.
- **The step indicator is small and weak** (tiny grey chips); progress does not feel like progress.
- No motion between steps; no stock, price or popularity information to guide the choice.

What you must do

1. **Panel:** clean premium surface. Graphite glass with real depth (soft inner light, fine grain, a thin yellow top edge), generous spacing, and a calmer dimmed page behind with blur. It must feel like the hero, not like a settings dialog.
2. **Step indicator as a circuit with LEDs** (same language as the teardown LED rail): Brand · Model · Part · Grade. Completed steps light yellow with current flowing to the next; each completed step shows the choice ("Apple ✓") and is clickable to go back.
3. **Step 1 · Brand:**
   - Brand tiles with **monochrome logos in one consistent style** (logo slot; text wordmark fallback in one font weight), only to show compatibility.
   - Inside each tile: models count, parts in stock and a small stock signal. No dead space.
   - Balanced grid: 14 brands as 7 × 2 on desktop (or a layout with no orphan row).
   - "Popular" row on top (e.g. Apple, Samsung, Xiaomi) slightly larger.
   - Hover: tile lifts, yellow edge glows, logo lights up.
5. **Step 2 · Model:**
   - **Yes, model images:** every model tile gets an **image slot** showing the phone (front view, consistent angle, same size and neutral background). Until real images exist, use a clean outline silhouette of that model's shape, never a cartoon.
   - Series tabs (iPhone 16 · 15 · 14 · 13 · 12 · 11 …) above the grid; search with instant filtering that matches name or model number (A3084).
   - Each tile: image, model name, model number, parts available. "Recently viewed" and "Most searched" chips.
7. **Step 3 · Part:** part cards with the **same realistic part renders as the Parts Cabinet** (screen, battery, back cover, frame, flex, camera, small parts), stock and "from" price. Out-of-stock parts dimmed with "Notify me".
8. **Step 4 · Grade:** grade cards side by side (Original · Service Pack · OLED · Incell · High Copy): price, stock signal, warranty, one-line "best for" note, and **Add to cart directly** (with the fly-to-cart animation). Wholesale price shown only to approved trade accounts.
9. **Motion:** steps slide horizontally with depth (the chosen tile flies into the step indicator); tiles stagger in; numbers roll. Everything smooth and quick: the finder must feel fast.

10. **Footer:** live summary ("Apple · iPhone 16 Pro · Screen") + "Open in Shop with these filters →" + result count rolling.
11. **Two ways to open it** (both): click Find My Part to open this full finder; hover the nav button for a compact mega-dropdown (brands → models) that does not leave the page.
12. **Mobile:** full-screen sheet sliding up, one step per screen, large tap targets, images kept.
13. Show me all 4 steps, the hover dropdown, and mobile.

DO NOT

✕ Do not use grey-on-grey tiles.
✕ Do not mix brand text styles.
✕ Do not leave orphan rows or empty tile space.
✕ Do not show models without an image slot.
✕ Do not slow the finder down with long animations (each step transition under 400ms).

DONE WHEN (every box must be true, or the section is not done)

[ ] Premium panel, not grey-on-grey.
[ ] LED circuit step indicator with clickable completed steps.
[ ] Consistent brand logos, balanced grid, stock info in tiles.
[ ] Model tiles with image slots, series tabs, instant search.
[ ] Part cards with realistic renders; grade cards with Add to cart.
[ ] Hover mega-dropdown works.
[ ] Recording of all 4 steps + mobile.

SECTION S · SEND ORDER AND FINAL CHECK

The order you work in

9	Issue 15 (feed + reviews) + Issue 16 (request) + Issue 17 (finale).	Recordings + mobile
10	Full home page top to bottom, desktop and mobile, with the hero side by side.	Full-page recording

Before you send any batch, confirm all of this

[ ] I compared every section in this batch with the home hero and it is at the same level.
[ ] Every object looks real. No flat shapes, no cartoons, no slabs.
[ ] Something moves in every section, idle, on scroll and on interaction. Everything replays on scroll back.
[ ] No circuit touches or crosses any content (24px).
[ ] No off-palette colours.
[ ] No leftovers: no browse files, no empty reviews, no repeated coming-soon, no blank shapes, no clipped text, no outdated data.
[ ] The environment matches the Environment Map and no two neighbours share a background.
[ ] Every Done-when box for this batch is confirmed by name.
[ ] Mobile version included.
[ ] Recordings included for every animated section.

Final word from the owner. I know what this website can be, because the hero already proves it. I am not asking for small polish. I am asking for every section to be rebuilt to the hero's standard: realistic, alive, rich, branded and clean. Follow this document exactly, batch by batch. If anything is unclear or impossible, ask me before you build, not after.
